

VISUAL MATERIAL

Rothenburg/Zurich, 22.11.2010

Pistor-Edisun Power solar power facility, 850 kWp

View of part of the facility on the flat roof of the new goods depot. The recumbent array of the modules was dictated by the maximum allowable building height.

The newest generation of inverter attains the highest level of efficiency, some 98%.

Pistor-Edisun Power solar power facility

View of the Pistor AG office and warehouse complex with solar power facility.

Left: new goods depot

Rear centre: refrigeration plant

Right: factory building

Pistor-Edisun Power solar power facility

Partial view of the flat roof of the new goods depot. The horizontal arrangement of the solar modules makes good use of the roof's surface area.

Pistor-Edisun Power solar power facility

View of the facility atop the factory building upon completion of construction. The two halves of the roof have been covered in modules.
